

Apply Six Sigma Tools Now for Big Results

Many small organizations don't have the resources (time, people, and money) to become certified and implement the levels and belts of Six Sigma, but would like to obtain a high level of operational excellence that Six Sigma can achieve. During this session, you will learn how to leverage the basic elements of the DMAIC (Define, Measure, Analyze, Improve, and Control) methodology, indigenous to Six Sigma, without making significant investments and bearing the expense of training belts.

How can your company ramp-up to benefit from using Six Sigma tools now?

Program Outline:

- What are the 'belts' and when do you need them?
- Use DMAIC as a stand-alone problem solving model.
- When does DMAIC work without a project and when is a project needed?
- Look at DMAIC beyond Six Sigma.
- Conduct a DMAIC Kaizen Event.

Instructor:

Jerome T. Sobrowski, Six Sigma Master Black Belt

Jerry Sobrowski has held positions in training and education, operations management, and quality engineering, spending most of his career at LORD Corporation. He holds Bachelor of Science and Master of Science degrees from Gannon University.
