

Lean Accounting

Companies who have embarked on applying lean thinking and practices may not have thought about the role of management reporting information and the accounting team in supporting this transformation. During this one-day workshop, instructor Jean Cunningham will share her experience and insights in the following areas:

- Lean concepts from the shop floor apply in every area of the company, including accounting
- Five sources of financial improvement with lean
- Improving cost management reporting to improve usefulness, while simplifying at the same time
- Utilizing information in the accounting records to identify upstream process improvement opportunities
- Applying lean concepts to reduce waste in accounting operations

This class is **eligible for 8 CPE credits** and combines lecture, dialogue and simulation.

Learning Objectives:

- Understand the role for accounting beyond reporting and auditing
- Evaluate financial impact of lean efforts beyond cost cutting
- Understand alternatives to standard cost accounting or cost management based on value streams
- Use metrics for performance monitoring

Participants:

CEO's, CFO's, controllers, accounting team members, audit managers, and lean champions.

Instructor:

Jean Cunningham, as CFO of two manufacturing companies and consultant to lean organizations, has found a new and improved role for accounting to provide better value information to the organization as well as reduce the effort required for accounting operations.

Participants will receive a copy of Jean's book, *Real Numbers*, which was awarded the Shingo Prize.
