Marvels of Manufacturing

I don't know very much about manufacturing really at all. I remember going to one when I was younger. It was in Meadville, that's all I really know. It was kinda cool to see all the machines and parts. I think they were making parts for cars. I wonder what would happen if manufacturing wasn't a thing. I feel people wouldn't be able to survive for as long. I'm glad manufacturing is a thing though because it makes businesses and people happy. It makes life easier.

Marvels of Manufacturing

Manufacturing doesn't always have its own description because it has many different meanings and ways. Manufacturing is a way of making an item with lots of parts to it whether that be one of the most common one which is vehicles or motorized item. Manufacturing is good for lots of things like our country because it keeps things moving and provides jobs for many Americans. Manufacturing also has downsides like taking nonrenewable resources from the environment and also pollution. All in all I believe that manufacturing is not only good for us or our country but overall our world to keep the wheels turning.

Marvels of Manufacturing

I know that manufacturing is an industry that makes products from raw materials. Manufacturing is defined as the creation of new products, either from raw materials or components. Examples of manufacturing include automotive companies, bakeries, shoemakers and tailors, as they all create products, rather than providing services. Some jobs I would be interested in are, baker, welder, and a woodworker.

Marvels of Manufacturing

I never realized how much manufacturing has to do with everyday lives. I'm not entirely sure what it is, but I know it helps make things that are very useful, like cars. Cars are something we use everyday. I also know people who work in manufacturing must be hard workers. Manufacturing also requires a lot of labor. Nobody in my family works in the manufacturing industry. But my dad does work in an industry that requires a lot of labor, like manufacturing.

Marvels of Manufacturing

Manufacturing is a very important part of American culture and always has been. Manufacturing is the backbone of America and gives jobs to very many adult men and women. 12 percent of America's population has a manufacturing job. It benefits our society by giving good jobs to people who are hard workers but aren't the smartest . manufacturing makes building things so much easier it makes goods that we the people need and want a whole lot cheaper. I see myself working in a factory like that when I get older.

Marvels of Manufacturing

The main idea of manufacturing that draws me to its process is its opportunity for the process to be semi- to completely environmentally friendly, which I think makes it all the more important. Climate change is an ever occurring issue in today's current society, and climate change is caused by a number of factors. Some of those factors include, but are not limited to, human activities such as the use of fossil fuels, burning/destroying forests and mass farming/ livestock production. Climate change is affecting or going to affect life on Earth by rising maximum temperatures, rising minimum temperatures, rising sea levels, higher ocean temperatures, an increase in heavy precipitation (heavy rain and hail), shrinking glaciers, and thawing permafrost. Now that has heavy chances to make Earth uninhabitable in the near future, which could affect me or my future children. However, manufacturing has opportunities to help stop climate change. For example, energy efficiency, fuel switching, combined heat and power, use of renewable energy, and the more efficient use and recycling of materials could help reduce the carbon footprint and battle the climate crisis. Another plus is manufacturers can also help by manufacturing sources of renewable energy, such as solar panels or wind turbines. This is how I believe manufacturing can help to create change, and make a better Earth for me and everyone else to live on.

Marvels of manufacturing

Manufacturing is the production of products and materials with machines and labor. Many different machines can be used. Things like 3d printers, laser engravers, mills, drill presses, and so much more. Manufacturing can be split up into many different groups of what is being produced. One example is drafting. This is usually when people make drawings on autocad or inventor to make designs for products. They will then use things like the 3d printer, laser engraver, and/or other things, to actually get the model from their drawing. Precision engineering is another example of manufacturing. In precision engineering, many complex machines can be used to make models of things from blueprints and much more. Some other examples could be a wide range from welding, car making, to much more. So, manufacturing is a broad word that talks about the production of many different things. There are lots of job opportunities for all kinds of manufacturing, and more jobs have started to open over the years.

Marvels of Manufacturing

I know that Manufacturing is a very important thing in the United States. I am not an expert at manufacturing but I know that my dad works in manufacturing. He works for Borntic Construction and is one of the bosses at the company. My dad fixes and builds different parts of machines for different companies. For example, he has to travel sometimes to deliver a part that he made for the machine or to fix the machine that is broken. My dad does a lot of welding at his job. He tells me all the time to not get in a job like he does. He says it is too much time and it is not worth it. Not because of the money, he makes very good money. He says it's because it ruins your body. Working in different environments with bad chemicals in the air is not good for you.

Marvels of manufacturing

I don't know like anything about manufacturing but a lot of my family works in manufacturing. My dad works to makes car parts and my grandpa owns and works in a tool and dye shop. My grandpa is rich and my dad makes good money so they are good jobs my brother also works in a manufacturing business. I know manufacturing has been around for many years and It would be cool to get a good manufacturing job but I don't know if i would like it.

Marvels of Manufacturer

My cousin is a manufacturer in the Product company of Apple. He fixes screens and fixes any device that needs new parts or needs fixed. He makes good money doing it because he is one of the best repairmen in the store. He gets a lot of customers because he fixes devices correctly and you can always count on it being able to work again. That's honestly all I know about manufacturing because my cousin is the only one who has brought my attention to manufacturing.

Marvels of Manufacturing

Manufacturing is the process of making anything, mostly factories are where manufacturing takes place. The number one thing that gets manufactured in vehicles, especially semi trucks, it's because they are important for the economic part of this world because they move this stuff around.

As a diesel student i have grown to appreciate the manufacturing business, without them i would never get the parts that i need to fix the stuff I have to get done, and i would be able to graduate and get my dream job and get on with my life, but that is the basic amount of information that i know about the manufacturing business.

Marvels of Manufacturing

My dad works in the manufacturing industry. He works as a full time Welder making all sorts of trailers. Although I am not very knowledgeable in the manufacturing side of things in the world, I know how hard of work it is. My dad often comes home tired, and quite exhausted from his work. He has a disease called Multiple Sclerosis, and after long hot days at the shop welding for hours it can sometimes mess with him, but this has never stopped him from putting in his best effort. I understand that there can also be dangers to these careers. From my dad coming home with shock burn to accidentally cutting his arm open on a sharp piece of metal in his shop. As I said before I don't know much about the manufacturing industry yet I still appreciate and understand the hardships that these workers have to go through everyday for us, and has made me look up to my dad even more.

Marvels of Manufacturing

Manufacturing has made a huge impact on our society today. There are many things that are manufactured and help make things so much easier. My uncle works at Channellock and has worked there for 31 years. He makes tools that are sold all over the country, and they are produced in Meadville. The variety goes from pliers to screwdriver to wrenches, and so much more. From what he says people work there all day long from early in the morning, so they can produce more. It has 2 plants that require a good amount of employees.

Marvels of Manufacturing

Manufacturing is the production of goods that we use more than we even think. I know we have a few big manufacturing companies in our area and I think they play a huge part in how our area is perceived. The companies seem patriotic and have been around for so long. Some of them are a part of history.

I think manufacturing should be more focused on the quality of the products and goods that are being produced. Although, I know that the focus is on money and profit, as is everything else. I think manufacturing could be completely changed and appear to the average citizen a lot differently if it was based on quality.

Marvels of Manufacturing

Manufacturing has touched my life very deeply. My father works at Advance cast, but it is called Grede now. From his job he was able to become the president of his union. I know that his job has to do with helping people get what they need and helping his other workers.

Most things today are made up of parts that were manufactured. No matter what you do you will come upon something that was manufactured. To be honest, it is incredible the amount of work that goes into making all these different parts that sometimes make bigger parts into bigger things. I find it so cool how the things that make something can be made up of tiny parst that were manufactured in a big factory.

Marvels of Manufacturing

Manufacturing is beneficial to our society because it is helpful to local businesses. For instance, my dad works at Pa Tool and Dye and does precision machinery. He was talking about his new boss and how they were gonna be making parts for planes and such because he talked about how he could get in trouble if a plane were to malfunction. Manufacturing also helps out with new technology, and makes even better technology.

Marvels of Manufacturing

Manufacturing Marvels a series of educational and promotional videos highlighting US manufacturers and how their products and services contribute to many industry sectors. and they make parts for things like phones and computers and other. And they also do hardware and software and more. You can also start your own business and sell stuff. It can be a skill from school.

Marvels of Manufacturing

I really don't know a lot about manufacturing other than the manufacturers make components for planes, cars and all sorts of automobiles. My moms old friend used to work at acutec in meadville and he made parts for planes, and I always thought it was such a cool job.

Marvels of manufacturing

I understand what manufacturing is my dad works for wheatland tube that is a steel mill he is one of the operators he has worked there for 29 years and he will get his 30 years next year and he can retire the company is owned by some guy in canada and my father says a lot has changed in the years he worked there things have become automated over the years because they don't have enough people to work there.

Marvels of Manufacturing

Manufacturing is very important to the U.S economy, and society. Manufacturing in the U.S is not as popular as it once was, therefore decreasing many American jobs. Foreign manufacturing can be cheaper, and is why many products are not made in America. I think that manufacturing should be more popular in the U.S, but people are greedy and want the cheapest way possible to make profit. Manufacturing in the U.S needs to become more popular so the economy can heal, and more citizens will be employed.

Marvels of Manufacturing

I understand that manufacturing is a big part of our country. My definition of manufacturing is of a big or small company making a certain type of product with large quantities of it and also very good quality that sells to the public and worldwide. So for what i know is that manufacturing has been around for over 100 years so manufacturing is a really good thing

Marvels of manufacturing

My dad works in manufacturing. He makes the brakes for trains. He says that he makes good money but there is not always a lot of work. He has been working there for about 15 years and he has been very successful. I would like to pursue a job like making engines for trains or working on planes. After I get the proper training I will be able to get into a job like my dad's.

Marvels of manufacturing

Manufacturing has had a huge impact on the world's economy but myself does not know much about manufacturing. Some of my family members work in manufacturing and say that they like it. For instance my cousin works at Channellock and makes hand tool items to make the job easier such as many types of pliers. I would like to learn more about manufacturing.

Manufacturing is the making of articles on a large scale using machinery. What manufacturing means to me is factory jobs or some truck driving jobs. My dad is a truck driver for a small pallet company. But he used to drive trucks for an oil company that manufactured oil. It benefits our society by mass producing products we use every day really fast and efficiently.

Marvels of Manufacturing

My life is affected very much by manufacturing. My father for example is a tool and die operator in Erie, PA. he works at one of the biggest shops and from what he tells me manufacturing is a part of everyones life. During Covid my dad said they had made parts for ventilators and now the shop is mostly making medical parts. Hes told me that they have made training rounds for the military as well. This goes to show that even just this form of manufacturing is bigger then it seems.

I would like to go into some form of manufacturing after college and try to work around northwestern Pennsylvania. I want to be a engineer of some sorts or i would like to go into the military and become one. This is how manufacturing is a part of my life.

Marvels of Manufacturing

Something that i could not live without that was made by manufactors is my four wheeler. Thanks to manufactuars i can go and have fun on my free time. Four wheeling is one of my favorite hobbies as well. Another product made by manufacturers that I can't wait to use is my car. It is my moms right now but once I get my license it will be mine. With it, I will be able to drive to places and go hang out with my friends. Thanks to all the manufacturers that have made the products that I love to this day.

Marvels of Manufacturing

There has not been a day in my life where I haven't used something created by manufacturing. Although I know very little about manufacturing itself, I know that it impacts my life greatly. Everyday my phone alarm clock wakes me up, my phone was created by manufacturing. I then brush my teeth using the water that comes out of my sink faucet and just in that one action I'm using multiple parts created through the process of manufacturing. My toothbrush, the faucet, my sink, and the pipes used to get water to me were all created that way. As I stated earlier, I do not know much about the process of manufacturing, but I do know that my everyday life would be very different without the marvels of manufacturing.

I think that manufacturing is a big part of our everyday lives. My dad is in tool and die and he does so much with making parts and pieces for different things. Manufacturing is everywhere around us from metal products to plastic and rubber products and transportation systems. Manufacturing makes life easier.

Marvels of Manufacturing

In the modern world, manufacturing is the lifeblood of an economy. Without manufacturing, any economy will eventually collapse. Manufacturing is driven by the need to make a profit, and many companies in the manufacturing world show this through sub-par performance, and cheap, inferior assembly of the product. Many companies employ refugees, or even build their products overseas, because labor is so much cheaper. This puts stress on good companies that build their products domestically and well. This then drives those companies to find another way to profit, often through advertisement. Some companies are now holding it as a source of pride that they build and assemble their products entirely within the United States.

Manufacturing brings a profit, and prosperity to a local economy. Meadville, Pennsylvania is a bustling city, with many people doing well, or at minimum making a modest living, due to the presence of Channellock Tools, Inc. factory.

The manufacturing world employs large numbers of the population, and honest companies pay their employees well. This contributes to a healthy economy, and gives the employees the means to buy the company's products, and stimulate better business. Some companies even give their employees certain percentages off their products, due to their hard work and dedication. Manufacturing is what truly drives our economy, and our world.

Marvels of Manufacturing

All of my life I have used Honda off-road vehicles. They are the one company where I feel committed to for many reasons. They are always some of the best quality vehicles. For example I have a 1984 200 s three wheeler. It is that old and is still running very well. I also have a honda rancher and it runs very well, and you can beat them up and they just will not break. I also had a 250cc trx and I have rode that so much for the past three years and it never needed fixed once and it was a lot of fun. I have found that they have the best models for all of their vehicles. They probably have saved me lots of money because of their durability.

All of my family uses Honda too. If you want to have a lot of fun in the outdoors and get through the deepest mud holes you would want to get a honda. I have so much fun riding with my whole family and they would drive as fast as they can through long stretches of mud and just power through it. We also would climb up mountains on those machines, and I just find nothing better than the thrill of riding a Honda four wheeler.

Marvels of Manufacturing

By Ariana Hannan

Manufacturing is one of the most important jobs for our country. It has been going on in the United States for many years. Many of my family members used to work in the manufacturing field. It is a very good paying job and they all had very decent and stable lives, including money wise. I am pretty sure that they all, or most of them, have new jobs they are working at, but even if they are not working at the same place or still are, they all did a very big contribution to our economy and our country by working in the manufacturing fields.

Marvels Of Manufacturing

Manufacturing is very important in our society. Without it, we wouldn't have half of the things we have today. My mom works at a place where she manufactures gun parts, grenade parts, and the whole other nine yards of parts to go along with that. Now that is just an example of some of the manufacturing that goes on. There are all different kinds of people that manufacture smartphone parts so we are able to have smart phones. People manufacture parts for tvs, ipads, computers, etc.. There are so many other things people manufacture in today's life that not only benefits our society, but also helps people survive. I could go on and on about all the different types of manufacturing industries we have today, but what I had said are just a few of many prime examples.

MARVELS OF MANUFACTURING

Manufacturing is the making of items on a large scale using labor, machines, tools. To me, manufacturing is what most people in America do to make money and support their families. America manufactures a lot of the products or materials that we use. There are many different types of manufacturing like steel, raw material, wood and many more. CNC machines are used in some manufacturing businesses. Manufacturing brings the U.S. economy a lot of money. That is some of what manufacturing is to me. When I am older I would like to work in some sort of manufacturing job, something with welding if I can.

Marvels of Manufacturing

Manufacturing is making goods that people need. Many different companies sell parts to each other to make different products from massive military fighter jets to a shovel that you use for digging a ditch in your backyard.

It is very difficult for a single company to be self-reliant, because they need parts to make their parts, so someone else can make their own parts. It's almost like a paradox, because it's a never ending cycle of producing goods from other goods.

It's important to have manufacturing in America for a number of reasons. If we ever go to war with a country that is supplying us with something, then what do we do? Ask our enemies for supplies? Or if that country goes to war, then it would need those materials to protect itself.

Another reason for us to be more involved in American manufacturing is that it helps our economy, and lets us enjoy the freedoms that we know today.

Marvels of manufacturing

I now understand that manufacturing now all the way back to 1940, Manufacturing helped our country build cars, planes, tanks. Many people were able to make a job out of it and it to this day has still helped us with many rigorous tasks. Thanks to Manufacturers we were able to make machines that helped us construct buildings, all the way to just to call a friend in another room. I've always wanted to work in manufacturing to one day find something new and unique that might once again change the world.

Marvels of Manufacturing

My dad, the owner of a construction company, talks about manufacturing. He talks to me about how the manufacturing industry is so important to him and his business. One time I got to go with him to a factory where they were building parts to make tools we needed to get our job done. Everyone who I talked to said that they really liked their job and they wouldn't go anywhere else to work. I'm really glad we have people today who like to work hard for our country.

Marvels of Manufacturing

Manufacturing is important for our country. My father works in a factory and makes parts that go into vehicles and machines. He makes a decent amount of money to support our family. Going into manufacturing can be competitive with how much it has improved over the years. This is a possible career field I may go into after getting the proper education and possible internship.

Marvels of Manufacturing

I do not know much about manufacturing nor do I know anyone who is in manufacturing, but something I do know is that manufacturing is good for our country. Manufacturing has made it so we don't have to buy as many products from other countries. It's made it so we can just manufacture whatever we need here in the states vs buying it from another country. Also if products are being manufactured in the states then we could possibly rely on the product being better quality, rather than it being mass produced by other countries to just make money. Another thing that I know about manufacturing is that it can create a lot of jobs for people with a decent pay.

Marvels of Manufacturing

Manufacturing is very important in our society today. With many people in rural and suburban areas of the US working in factories, the manufacturing business makes America truly great. Over the past 10 to 15 years, manufacturing has boomed the US population, with less imports from foreign countries, and more from our local factories.

To many people, including myself, manufacturing means new jobs, new products, and more of the American spirit of our country.

My father works at Vitro Glass Company in Meadville Pa. He is very proud of his work, being he makes windows, cars, and even bottle glass for people all over the country.

Manufacturing is the most important part of our modern lives today. We rely on products coming from many different factories and from businesses. Not only do we want some of these products, but we also need some of these products. Some products we need in our daily lives that are manufactured here in the US are, but definitely not limited to, glass products, metal frames, cars, and even the food we eat.

181 words

Manufacturing is the production of goods of a large amount using machinery. Manufacturing has helped create more jobs for people in our society. While creating jobs and usually paying well, this industry drives economic growth. Manufacturing also drives innovation. This industry is more likely than non-manufacturing companies to introduce new products and business processes. From the people to the economy, manufacturing is beneficial to society.

Marvels of Manufacturing

Manufacturing is “indirectly” a big part of my life. Not in terms of me actually working in the field, but what is done to make PC components. Building and learning about PCs, laptops, phones, etc. is what I’m studying and want to go into after I graduate.

Once I do graduate, the job I do get (hopefully) will be around PCs, whether I’m the one operating the machines that build the components, or if I’m the person who assembles PCs for a company like DigitalStorm. Who knows, one day I could even design a component if I do well enough.

Marvels of Manufacturing

Manufacturing to me is the making of products like car parts, tools, etc. I know that is very important because without these things we wouldn't be able to live like we do today. I understand that now most of our manufacturing is done by foreign countries because of income prices. I think we should manufacture most of our stuff because we don't if that stuff could be defective or built wrong. If we did it ourselves we would be able to have people who check those types of things. If we break into war and a big manufacturing supplier is in that country, then we aren't getting that stuff anymore, I think it would also make manufacturing more important to us in the United States. I know a big American manufacturing company is Channellock. I think we could use more manufacturing companies like that because it could help with unemployment. Those are the things I think manufacturing is and why we can try to bring some of it back to America.

Marvels of Manufacturing

I do not know much about manufacturing, but I know that it is very important in the world. Manufacturing makes parts that are used in everyday life. I have a four-wheeler that stopped working. So, we had to order a new part. We know that part was made at some type of manufacturing plant, which helps me to understand why manufacturing is so important. We wouldn't be able to live our everyday life without manufacturing.

Marvels of Manufacturing

I know close to nothing about manufacturing, its not what interests me. I know that its like making cars, the basics. And maybe i should learn some more. But like i said not interesting. But a few of my friends like it and is interesting for them so they can take it and ill ask them for help if i need it.

Marvels of Manufacturing

In my eyes manufacturing is a big part of our everyday lives, everything we use in a day's time is a product that was manufactured for the working people to use each day. As you can see, manufacturing is very important. It gives a job to the people trying to put food on their table at the end of the day to feed their family. Also not only manufacturing is important but manufacturing in the US in most instances we will spend less money making products in our country other than buying from different countries.

Marvels of Manufacturing

I don't know a lot about manufacturing, but I understand that it is important. Manufacturing helps our world to fight and stay alive. Some of the goods that are made are used in the military to make better war machines, like guns and airplanes. Other goods are used to help make machines that harvest food to feed our people. Manufacturing also gives people a chance to make money, and help their country. Without manufacturing we would have no toys, food, fresh water, and no transportation. The country would be in trouble without the war goods that are manufactured today. This is how manufacturing benefits our society.

Marvels of Manufacturing

Manufacturing is very important for our economy. My daddy works at channellock. He hates it so much. He does make good money but he has worked there for like 20 years. Joseph robbinett biden does make it worse. He makes procedures that they have to follow and my daddy does not like it. So manufacturing has been going down since our "president" joseph robbinett biden has been alive ong.

Marvels of Manufacturing

Manufacturing, a trade that has built several communities and cities here in America over the past two-hundred-thirty years. It is important in multiple ways to this day not only due to the cultural benefits, but also because of the boosts that it has provided to our economy as well as the effects it has had on world trade as a whole.

Marvels of Manufacturing

Manufacturing is the process of mass producing consumer products. It is used in industrial production and is very beneficial towards society. Manufacturing offers job opportunities to workers and produces everyday items people use. Without it, we wouldn't have things like cars, houses, clothes, and even food. Manufacturing is a big part of our lives because it provides almost everything we need or may want. There are three types of manufacturing: make-to-stock (MTS), make-to-order (MTO), and make-to-assemble (MTA). Each of these prove very useful and helpful in the manufacturing process. They make the process faster and more efficient.

Marvels of Manufacturing

I understand that manufacturing is a very important part of our economy. I personally do not know anyone who is a part of the manufacturing job scene. Recently I have been noticing more and more manufacturing plants and jobs being brought back to the United States. I think that this is a good thing and makes sense that we are doing it.

It makes sense that we are deciding to do more of the work ourselves since then we do not have to pay for shipping and taxes to other countries to do our dirty work. Even though many people do most see manufacturing as a so-called dream job, the work that people put in is very important. People who work in the field should have a sense of pride in the work that they accomplish. This is due to the fact that they are improving our country a little bit at a time every day.

Marvels of Manufacturing

I do not know much about manufacturing, but my Dad did work at Switch and Go and he made metal shelves, powder coated equipment, and assembled air hoses. He liked the job, but the people were not that great. He would always come home and hop in the shower to get all of the grease and grime and spray paint off of him. My great grandpa worked making kitchen appliances and he liked it very much before he retired. They eventually closed down that factory but my grandpa still has those appliances he made.

Marvels of Manufacturing

Looking at the information you have provided about manufacturing I would want to learn more about it. I would like to learn more about manufacturing because I think that it is cool to build things piece by piece like legos. My favorite manufacturing is probably car manufacturing because you get to take a bare frame and turn it into the cars that you see on the streets today. People who work in manufacturing are a vital part of our country. If we didn't have people like you who work at manufacturing companies we wouldn't have the school buses, phones, tv's, xbox's and ect. So thank you for all you guys do for us in this country.

Marvels of Manufacturing

My dad works in the Starn Tool and Die Manufacturing Industry. I have gone to his place of work many times and have been able to see him running various machines. He has told me a lot about this industry such as the different types of parts they make and what they are for. They use precision machining to create various parts such as parts for robotics, drones, assemblies, medical devices, autonomous machines, airplane parts, and even parts for military machinery at times. My dad has worked in many different manufacturing companies, so he has a lot of experience in this field. He told me that precision machining involves a lot of math because they have to be very precise when making a specific part. Where he works, they run a lot of machines that help cut metal into certain parts in which they are trying to make. This is only one of many fields of manufacturing, but this is the one I have found the most interesting and I find it cool that my dad has been in this field for several years. I am sure there is much more that I will be able to learn from him about this field throughout the years to come.

Marvels of Manufacturing

In my own words, manufacturing is producing goods or material that can help someone make money. I would believe that manufacturing benefits our society in many different ways. For starters, manufacturing can give a lot of different people good jobs. Secondly, I would say manufacturing is what can make the US money that can get us out of our debts. I really cannot say I would like to know anything more about manufacturing, it really will not affect my future, I don't think that would be for me.

Marvels of Manufacturing

Manufacturing benefits our society so much. We would not have any of the things we do today if we didn't have manufacturing. Manufacturing produces materials we use everyday. The desks we sit at and the chairs we sit in all come from manufacturing. If we didn't have manufacturing we would not have much of anything. Everything we use comes from manufacturing companies. Sometimes the companies even have to work together to make things.

Marvels of Manufacturing

To my understanding, manufacturing is very important to our country. I think of manufacturing as the process of creating different products through a big production process. Manufacturing has a huge impact on our society and many benefits because it creates products and goods that we need. Since our country can self-manufacture, it makes it easier to send out throughout our own country. Doing it ourselves rather than buying products that other countries manufactured makes it a whole lot easier as well. Other than being easy, manufacturing here is so much cheaper.

Marvels of Manufacturing

None of my family members that I know of work in the manufacturing industry. So because of this I don't really have any knowledge of manufacturing. My aunt is in the military, so she gets many items that were made from manufacturing plants. If it weren't for those items, then it would be very likely that it would cause trouble for our military and our people.

If it weren't for the people that manufacture items, it is hard to imagine what the world would be like in today's life. We wouldn't have cars, trucks, planes, or any sort of automobile. For that alone I am thankful for those that work in the manufacturing jobs. Without that, we would have to walk to school or find a different way to get to school.

It's not only just cars that we use on a daily basis that involves manufacturing. There are other appliances that we use, such as microwaves, ovens, stoves, and fridges. Without these then our food would easily get spoiled or ruined. People would get sick because of the raw meat or raw food.

In general, I might not understand much about manufacturing, but I do have respect for it and for those who are willing to work with manufacturing jobs.

Marvels of Manufacturing

Manufacturing reaches many homes in the United States. Manufacturing not only gives jobs to those willing to work but also makes products for those who want to buy. Using products made through manufacturing in the United States creates less debt to other countries. Most of the time the other countries do half the work with less experience making their products just not as good as ours. With our work ethics here we are able to create good durable products in comparison to most other countries. Thanks to taxes on imports we are able to begin manufacturing more products in our nation.

Marvels of Manufacturing

Manufacturing is the process of industrial production. It benefits society by not having to buy manufactured goods from foreign countries. When I get out of highschool i'm hoping to get a job manufacturing automobiles. If we didn't have people manufacturing things in our country that we needed are government would have to spend money to buy things from foreign countries

Marvels of Manufacturing

My mom works on the computer side of Manufacturing. She goes to North Carolina every month for a week to work there. My mom does the inputs and outputs of the products at the plant. The plant is called "Beverage air". They make dishwashers, fridges, freezers,ect. I know that a lot of people only think about the hands-on work with manufacturing, but my mom's job is still a very important part of the manufacturing workplace. I don't know much, but what I do know is that manufacturing is all over and I know it can really thrive if people and companies work together.

Marvels and Manufacturing

My father is a truck driver and he delivers for the manufacturing companies. He wishes he could get a job with better pay and he can be home more often. He has worked in a manufacturing business before. He welds parts and makes parts for cars and bridges and things like that. He decided to work as a truck driver so he can support my family. He wishes he could be home more. But he has to make money to support us. As well as keeping himself organized as a person he likes to be by himself. He loves his job and enjoys the scenery from all over the United States and Canada. Boy do I wish he could be home all the time because everyone in my family misses him.

But he has to make money so he does what he loves to do , being good at his job.

Marvels of Manufacturing

My grandpa owned a manufacturing business where they made C-Clamps. The business was called Erie Tool & Forge but it was sold a few years ago to another company. They made other products as well but c-clamps were their main product. My mom worked there too as one of the office ladies and she was in charge of making sure everyone got their checks and that all of their customers had what they needed. The inside of the shop was full of large machines and welding areas and my grandpa made sure everything was running smoothly. Although I do not know much about manufacturing I know that it is very important around the world.

Marvel of manufacturing

My take on manufacturing is that I really like it and it is really good for the world. One of the reasons I like it so much is that I go to a tech school for precision machining. Another reason I like it is because my family knows a lot about it so it makes it easier to understand. I feel like it would be less of a world without manufacturing.

Marvels of Manufacturing

I think that I have an idea on manufacturing works. I think it's where companies make products and then give those products to bigger companies that mod that product. Then they proceed to sell what they made with that product to a bigger company. I think an example of manufacturing is what the U.S does with china.

There is a lot of stuff that we get from China and that we mod and sell to make a profit. Also i think car companies do the same thing, they buy the car parts that they need from small companies so they can make cars with those parts that they bought from those companies. Manufacturing is probably a big thing that happens everywhere. I think a lot of companies manufacture their products and sell them to other companies for them to use.

Manufacturing companies have probably increased over the years due to how popular they are. There's probably tons of manufacturing companies in the U.S.

Manufacturing is the production of goods by machines, tools, and labor. It means producing goods in large quantities after processing from raw materials to more valuable products. Manufacturing helps us to live better. It also increases profit immensely. Manufacturing industries have helped in eradication of unemployment and poverty. It also creates connections within communities.

Marbles of Manufacturing

I Understand how manufacturing is a benefit to our society. but it is also beneficial to other eras of time including World war 2. Manufacturing companies that made certain products like the Detroit auto industry quickly adapted to making war time goods. These war products included around 2 million war trucks, 86,000 tanks, and 297,000 aircraft. The manufacturing companies benefited the society by creating millions of hard labor jobs and gave the U.S. an advantage in the war.

Marvels of Manufacturing

I know very little about manufacturing, but what I do know is that it is important that it happens or there would be no consumer goods or goods for other purposes. One of my favorite manufactured goods is for my animals. It is a brush that is made in the United States and is used to wash and break down show products that people put on livestock to make the animal look more impressive. This brush, although it is simple, is revolutionary and it is all thanks to manufacturing. Without the manufacturing of this brush the animal's skin would potentially rip as the product was being washed out and now with this brush the skin is kept in good condition and it improves blood flow in the animal limbs. I am happy that the company manufactures this brush but I am also happy to know that when buying this product it is supporting someone in my country.

Marvels of Manufacturing

On Main Street in Meadville, PA sits Channellock Inc., an American based manufacturing company that creates pliers. From miles away, you can see their huge American flag billowing in the wind. This flag not only looks beautiful, but it also represents a home based company who puts Americans to work. This benefits not only our community, but also our state and national economy. Channellock employs approximately 350 people. People working is extremely beneficial to our economy, mostly concerning taxes and government money. Channellock Inc. is based in America, which means importing these tools from other countries is not necessary. At Channellock, Americans can work with their hands to support their families which, in turn, supports our economy! What can be better than that?

Marvels of Manufacturing

A lot of my family has worked in manufacturing. My grandfather and three of my Uncles worked for Channellock many years ago. My grandfather tells me many stories about what he did and how he felt about working there. He said that he enjoyed the people and he got paid well so it was decent as far as jobs go. He still complains about it though because, well, work is work. And working in manufacturing is not always easy. It was definitely an important job because they manufacture tools which are greatly needed in society for building things.

Marvels of Manufacturing

My father works at a manufacturing plant in Saegertown and sells products to many different companies all around the world. One thing the plant produces is the glue that puts Tesla cars together. The glue also repairs cracked phone screens. He works almost 24/7 being either in the plant or on his computer responding to people. The job is a lot of hard work for him and like any job it has its setbacks, but overall he is participating in a job that is good for our country. He has worked there for around 25 years and will probably continue to work there until he retires, which is in about 15 years.

Marvels of manufacturing

I think manufacturing is very important for our country. Manufacturing is very good for us because if all the other countries made our stuff they could get mad and just not give us our parts we need. If they got mad and didn't give us our parts, what are we gonna do to get our supplies? Also if we don't have our supplies everyone in the country will get mad because there is a shortage. Another reason why manufacturing is so important is because we need our supplies in our country and if we don't have them the world won't be so good.

My friend worked at mfg. Mfg is a manufacturing company. At mfg they make treys and before they are made they have to get the stuff from a different company. Also when they are made they get packaged up and sent to the people that ordered them.

Marvels of Manufacturing

Manufacturing (n) : the making of articles on a large scale using machinery. That is Google's definition. I understand that it plays a large role in our economy, and also to others it means much more than that. For some people manufacturing is their entire life. I am not like that. I use manufactured products everyday. I am not sure where each of them come from, but I understand that work was put into them. Even if it was just a machine moving parts.

Marvels of Manufacturing

A family friend of mine works for manufacturing and he does all of those types of things. He told me about some of the things he does. He loves what he does and I enjoy listening to his stories. I personally don't know much about manufacturing, but I became interested in it after what he told me and after reading about it.

Marvels of Manufacturing

Hello my name is Landon Ransom and I am here today to inform you about how manufacturing benefits our society. You might be wondering how manufacturing benefits us but have you ever wondered how the parts to make a phone were created or how a computer gets all of its parts? Manufacturers help make such things to make our lives easier no matter how hard it is. Sooner or later they will have done it and the community will benefit from their hard work. In conclusion, the time that the manufacturers put in to their work will without a doubt help improve our economy.

Marvels of Manufacturing

My dad talks a lot about manufacturing things. I don't really pay attention or remember a whole lot but I do know that people who are a part of manufacturing get a lot of money. There are also different companies for manufacturing. I think my dad used to be a part of something with manufacturing but I'm not sure. He used to be a welder so maybe he was. I'm not sure though. I do know that he did get good money from some places while other places, not so much. I still don't really know a whole lot about manufacturing but I do know that it is very useful.

Marvels of Manufacturing

Manufacturing is a very important thing for America. A lot of the jobs occupied by Americans have something to do with manufacturing. Many of my family members work in the manufacturing business. However, we do get a lot of products from other countries. I hope to see a day where we stop depending on other countries to provide goods that we could make ourselves. It would save America quite a lot of money if we produced the goods ourselves. I understand that there are some things we won't be able to produce ourselves, but cutting down on what we take from other countries would benefit us greatly. It could provide us with even more jobs and sources of income. We would also cut down on the use of resources used to ship and deliver the goods from other countries. It would be better for America and better for our planet!

Marvels of Manufacturing

I agree that manufacturing is very important within the United States. Manufacturing produces goods over a large quantity in factories and often with the help of machines. Manufacturing is important because the country can make their own products without having to rely on different countries to produce them. It saves money that could go to better causes, it also benefits everyone because the goods are available to purchase by anyone. Manufacturing is overall just positive because it benefits our country by saving money, producing for people and more.

Marvels of Manufacturing

Manufacturing in the United States is what helps to keep our country on its feet. My grandfather has worked in manufacturing for over 20 years. Manufacturing is what helps to provide for my family and keep a roof over our heads. The production of parts made in the U.S. keeps us from having to rely on other countries for manufacturing. Today's economy usually reaches out to other countries for their manufactured goods instead of going local. The only reason our manufacturing prices are higher is because we cannot mass produce in as large of quantities as other countries. All in all, manufacturing in the U.S. is what helps to keep most families from falling into a poor category. I hope to fulfill my my share in the manufacturing business and labor side of the workforce and go to work on the pipeline or even work in a glass plant like my grandfather.

Marvels of Manufacturing

Manufacturing is very important to the economy. My uncle works in manufacturing. He makes pipes at JM Eagle. He has worked there for about 5 years. He says the money is good, but it could always be better. He could get a new job at any time but he loves what he does for the community and even locally. I don't think I would like to work in the manufacturing industry.

Marvels of Manufacturing

Manufacturing is the making of products for an easier way of life. I know that manufacturing is very important for our day-to-day life. As the population grows, we need more items to help us get through our lives. Products from all over the world are being made every second, and being shipped to all different countries all the time.

The manufacturing field is a very money hungry business. It's always a race to see who can spend the least on making a product and who can make the most profit. Money plays an important role in manufacturing because it is what keeps the business running. As the world grows, so does the development of products made.

There are many different types of products in the world today, and some I feel like I couldn't ever live without.

Marvels of Manufacturing

My father and papa work in the manufacturing industry. My dad says that he makes good money with his job, and that he enjoys it quite a bit. He has been working in the manufacturing industry since I was born. I personally don't want any type of job in the manufacturing industry, but I understand that it is very important in our society today.

Marvels of Manufacturing

Why manufacturing is good for the United States. It helps create jobs for more people in our country. The things being made are made by people that are in a country. Manufacturing is a many step process, manufacturing relies on other manufacturing to help make each other's parts. Manufacturing keeps the world running, it produces everything around us. Manufacturing helps keep the world running. Without manufacturing the world would not be able to function how it does now.

Marvels of Manufacturing

My dad works for a manufacturing company in Erie PA. It is called ISM. He is a floor supervisor and makes very good money. They make all kinds of parts but some of them have been train and golf cart parts. They make other things too but I'm not sure what they are. He likes the job but sometimes his boss can be a real pain. I am thinking about manufacturing but I'm not sure yet. I like that my dad makes a lot of money and I would like to do that too.

Marvels of manufacturing

I don't know much about manufacturing but i know they can make a lot of money.i applied to go to diesel tech at votech.They get parts in from a store or the customer brings them and they install them for them but i know that you can make a lot of money doing it i hope you have a great day

Marvels of Manufacturing

In my own words and interpretation manufacturing is the production or making of certain goods or products that we need in our society and lives. I also believe that it benefits our society because we rely on manufacturing for mostly all of our goods and products used daily. It also helps benefit our profit made on certain things made in manufacturing. We are also more apt to use foreign exchange systems for the goods manufactured. It also helps employ people. This is what manufacturing is and how it benefits our society.

Marvels of Manufacturing

I believe that manufacturing is the base of American society. Throughout our history manufacturing is what led America to become how powerful it is today. Manufacturing accounts for about 11% of the total output of the economy and provides around 8.5% of jobs in America. These numbers will continue to grow as we continue to develop new technology

Marvels of Manufacturing

Manufacturing is very important to our lives. I have a couple of families that work in manufacturing shops. Manufacturing is very important here in America. I may possibly get a good manufacturing job. I would Like to find one that has to do with welding.

Marvels of Manufacturing

I know very little about the manufacturing world. My step dad works at a manufacturing place sometimes not often but when they need people they call him to come and help out. I've been there one time, and there were car parts in some places. It's a big place and they manufacture a lot of different items to give to other companies, and they even have companies that give them some parts to help them. I don't know the name but it's a pretty cool place and I feel that they are making the community better, because they are helping other companies with their work and making whatever they need. I think that they get very good money from doing it, and some of their employees leave and get chances at bigger companies.

Marvels of Manufacturing

There are some very great manufacturing companies in the world but china is the biggest manufacturer in the world. Manufacturer contributed 2.52 trillion in the U.S, manufacturers that are made in the world are what give us toys for kids or cars for us to drive or houses to live in without manufacturing there isn't really anything they don't make i mean they don't actually build the houses but they do however make some if the things that go in your house couches tables fireplaces tile to go on your floor. There are some manufacturers in the world that make your technology: your internet, your phones, laptops, tvs etc your electric cars, your google echo, or alexa. They have been manufactured in a factory or even a store these are things we use every single day and need your stoves and your refrigerator they have all been manufactured in a factory and sold in a store to you for the house you live in. manufacturing is a very important thing that we all use and need and to me thats one of the coolest things in the world.

Marvels of Manufacturing

I do not know barely anything about manufacturing other than they make building parts. Almost everything in today's world is manufactured in some sort of way, from the car you drive to the shower head that spits out your water for your morning shower. Manufacturing makes parts to go together with other manufactured parts to assemble and create the common item being made for our use and needs.

Marvels of Manufacturing

I know a couple people that have a manufacturing job, They make fiberglass parts (trays, gun parts, etc.) The job is Molded Fiber Glass. The job is hard and painful but it needs to be done. It needs to be done so we do not have to purchase things from other foreign countries. We need manufacturing.

Marvel of Manufacturing

A lot of what we use and have today is made from a manufacturing company. Without manufacturing companies most of what we have right now wouldn't be here. From the phone in our pockets to the cars we drive, we would have to go by a different system and a more time consuming way. In order to make something in the manufacturing business, you could have to start with buying your starting process from a different company and use some of their parts first. Not everything that a company sells is theirs but it is their creation that they modified to become their own version or a better version at that. Things that come from manufacturers aren't always the best and sometimes can also be broken or not put together right. Manufacturing has helped everyone in today's society tremendously and continues to do so. With different things coming out everyday more and more things benefit us.

Marvels Of Manufacturing

I believe manufacturing is one of the most important things for our country. Today our country unfortunately doesn't care about quality but more about quantity. When my grandpa was a young man parts were made in america out of american materials by american hands. Now we have little manufacturing in the U.S. because other countries make goods for cheaper prices. Any manufacturing jobs we do have are frequently taken by illegal immigrants which is an entirely different problem. In conclusion I believe manufacturing is the backbone of a good economy and a great country.

Marvels of Manufacturing

My favorite product that is manufactured is baseball bats. I don't know a lot about the manufacturing process but I know we rely on it very heavily. My favorite baseball bat manufacturing company is Easton. They produce a very good bat and it gives me confidence at the plate. My Easton baseball bat lasted me through a cold and rainy baseball season without any issues. I think that this proves Easton is a good manufacturing company.

Marvels of Manufacturing

Manufacturing to me is the supply of resources. My friend Luke is in the manufacturing field so I do know a little bit about how he runs mills. He is very into his position in the votec center in our town, but personally I do not think that kind of thing is for me.

I think the manufacturing factories have gone really far down hill right now in the United States. Over the summer I worked for my dad and I remember having to cancel jobs because of the price and/or lack of product. I know covid made people shut down their factories but i also know that once they started up they should have been able to get back on their feets fairly easily. I think the lack of product does not only have to do with the factories and mills not being open but for the prices skyrocketing and the companies getting more money. In my opinion some of the people are just selfish and do not care about the product they put out or the time it takes to do it, but only about the money they get from it.

Marvels of Manufacturing

One of the assistant chiefs in the fire department I volunteer in is a manufacturer. He says he makes decent money. He knows he could make more elsewhere, but he likes having a connection to the company. He says he likes his job and enjoys what he does. He also enjoys his job because he gets to work with his hands.

Marvels of Manufacturing

Manufacturing is producing goods or parts that are then used to build other parts or to sell directly to retailers. Manufacturing is one of the four types of businesses: retailing, wholesaling, services, and manufacturing. Manufacturing is an important part of society because these businesses provide other businesses with the products needed to build the products that we enjoy.

My grandpa worked at Channellock in Meadville for a significant amount of time as floor manager. While being babysat by grandma, he would often tell us about what was going on in the factory, with stories about large machines crushing the metal into shape, or vats full of melted blue plastic that tools dipped into. To my little brother and I's young minds, it was baffling to hear about such a process.

I have no desire to be a part of the manufacturing trade, but I know of dozens of fellow students in my school who want to be able to contribute to society through this trade. Most of those students are already starting their manufacturing careers by going to the Crawford County Career and Technical Center to prepare themselves for the jobs that lay ahead.

Marvels of manufacturing

Manufacturing has not touched my life in an extreme way, but manufacturing does produce my favorite things in my life. Manufacturing is very important in the US, as we need products shipped out of the US and we need products shipped into the us. I do think manufacturing has an important role in my community, it gives people jobs and helps companies make new products. I do not know anyone personally who has a manufacturing job.
